Minimize Non-Compliance Exposure
Prepare for Operating System Migrations
Respond to Audit Letters

Stop wasting time and money having your SAM team spin their wheels identifying software!

Previous SAM Technologies Have Never Solved The Problem

Because most SAM discovery tools can only identify 40% - 80% of the software on your network, your organization may not have the necessary data to ensure full license compliance. This can put your company at risk from software audits, copyright violations, as well as significant non-compliance fines from government regulations such as HIPAA or Sarbanes Oxley.

Any Company Manager Can Be Affected

These issues can affect all levels of management, including CIOs, CFOs, COOs, compliance officers, as well as senior IT managers and staff. When budget dollars are tight it may seem easier to just ignore the issue, but implementing a total software asset management solution that identifies your entire Managed Software List will save you money, help you identify all your software licenses for compliance, and be an solid investment with a high ROI.

What You Don't Know Can Hurt You...

Make no mistake, what you don't know can pose serious financial, compliance, and security risks to your company's future.

Want to learn more?

Attend one of our FREE regularly scheduled webinars that will show you exactly what you need to know about the potential risks and show you how your company can save money while decreasing your software asset and IT liabilities.

For more information or to place an order, contact a Software ID Technology representative today and find out how our software asset services can truly help your bottom line.

The traditional Software Asset Management (SAM) programs have a mediocre 40-80% success rate in cataloging and managing all software assets.

“Identifying software applications is an amazingly complex challenge for any organization. The software asset management services industry needs to refine their products and deliver solutions that are simple, inexpensive and easy to use.”

— Barbara Rembiesa, President and Founder of the International Association of IT Asset Managers

The Leader in IDentifying ALL Your Software Assets!

A Proprietary Database is the Key

Headquartered in the Valley of the Sun near Phoenix, Arizona, Software ID Technologies (SiTech) is a professional services firm, and an industry leader in helping companies, governments, non-profits, and educational institutions identify ALL of their software assets. Using our proprietary database we help your organization implement a total software asset management strategy. SiTech provides organizations with a "Managed Software List" that is then used by your SAM software to reconcile your entitlement contracts.

Trusted and Highly Trained Consultants

Our highly trained consultants operate as adjuncts to your staff to fill in the gaps between what the software your discovery tool identifies (usually 40% - 80%) and the additional 20% to 60% of programs that require your company to expend significant effort and time to identify. On top of this the data that you work from is often inconsistent, or completely missing.

The tables below show a few examples of what we've seen and then processed ("normalized"). The benefit is that we do this work significantly faster and at a much lower cost than your internal project teams can.

"We had been trying to solve the riddle of unidentified applications in our environment for over 3 years when we engaged SiTech for assistance. They efficiently finished the work in a little over 3 months, finding over 5,800 publishers in our environment. We knew about and were tracking only 1,600."

— Software Asset Manager,
Fortune 500 manufacturing company.

Attend one of our FREE regularly scheduled Webinars that will show you how your company can save money while decreasing your software asset management costs and IT liabilities.
